

**Scenario:**

You are creating a simple website for a fruit store. The store wants to display a list of fruits with their prices. They also want to show a special message for fruits that are on sale.

**Requirements:**

1. Create an array of fruits with their prices
2. Display all fruits with their prices
3. If a fruit's price is less than 100 Tk., show "On Sale!" next to it
4. Calculate and display the total cost of all fruits
